

## INPUT

mean of an array

## FUNCTION

## OUTPUT

mean of [4,4,4,4,4,4] : 2

1. function statement named  
getAverage with parameter  
marks

3. /\* for loop with the first parameter:  
variable i assignment operator= 0;  
i is less than marks.length; i++ \*/

5. //variable avg assignment  
operator= total divided marks.length

2. //declare a variable statemen

4. code block: total += marks at he i  
pointer;

6. //return Math.floor function with parameter avg
